Summary

B.Tech Computer Science graduate with hands-on experience in Python, Machine Learning, and Generative AI. Skilled in building AI agents and GenAI workflows using LangChain, LangGraph, and Groq, and in developing NLP and machine learning pipelines with Scikit-learn and Pandas. Experienced in backend development using FastAPI and Streamlit with MySQL and SQLite database integration. Seeking an entry-level role as an AI Engineer, GenAI Engineer, or Python Backend Developer.

Internship Experience

Web Development Intern, InternPe 11/2025 – 12/2025

- Developed dynamic web application features using PHP, MySQL, HTML, and CSS.
- Integrated frontend forms with backend database operations and CRUD functionality.
- Worked on backend connectivity tasks, strengthening practical, deployment-oriented web development skills.

Web Development Intern, Apex Planet Software Pvt. Ltd. 06/2025 – 08/2025

- Built database-driven web applications using PHP and MySQL.
- Implemented CRUD operations, backend logic, and secure input handling with form validation.
- Applied structured coding and debugging practices to improve application reliability.

Education

B.Tech in Computer Science & Engineering, 2022 – 2026
Ramgarh Engineering College

Intermediate (Science), Sindri College 2020 – 2022

Technical Skills

Programming Languages

Python, C, C++, Java, PHP

AI / Machine Learning

Scikit-learn, Pandas, NumPy, NLP, TF-IDF,
Logistic Regression, Machine Learning

Generative AI

LangChain, LangGraph, Prompt Engineering,
GenAI Workflows, AI Agents, Tool Calling, Groq

Databases

MySQL, SQLite, SQL

Backend / Web

FastAPI, Streamlit, HTML, CSS, JavaScript, PHP,
REST APIs, CRUD, Authentication, Form
Validation

Tools

Git, GitHub, VS Code, Jupyter Notebook

Core CS

Data Structures, OOP, DBMS, Problem Solving

Projects

Google Search AI Agent, Python, LangChain, LangGraph, Groq, Google Serper Search, AI Agents, Tool Calling, Memory/Checkpointing

- Built an LLM-powered search agent using LangChain and LangGraph that interprets user queries and calls a Google Serper search tool to retrieve web results.
- Implemented tool calling within an agent workflow graph to route queries between reasoning steps and the external search tool.
- Added memory and checkpointing to persist conversation state across turns and support multi-step, context-aware queries.
- Integrated Groq-hosted LLMs for fast inference and structured the Python codebase for modular testing and experimentation.

SQL Task Management AI Agent, Python, LangChain, SQLDatabase, SQLDatabaseToolkit, Groq, SQLite, AI Agents

- Developed a natural-language SQL agent using LangChain SQLDatabase and SQLDatabaseToolkit to query and manage a SQLite task-management database.
- Enabled the agent to inspect database schema, generate SQL queries, and perform create, read, update, and delete operations on task records.
- Used Groq-hosted LLMs within the agent workflow to translate user instructions into executable database operations.
- Designed the agent flow in Python with reusable database tools, improving practical understanding of LLM-driven database automation.

AI-Powered Fake News Detection Assistant, Python, Streamlit, Scikit-learn, TF-IDF, Logistic Regression

- Developed a news classification application that detects fake vs real news using NLP-based text processing and a Logistic Regression model.
- Performed text preprocessing, TF-IDF vectorization, and model training, then integrated the prediction pipeline into the application.
- Built a Streamlit interface for entering news text and viewing model predictions in real time, combining ML pipeline design with a user-facing workflow.

Secure CRUD Web Application, PHP, MySQL

- Built a secure CRUD-based web application with structured backend flow and MySQL database connectivity.
- Implemented prepared statements and input validation to reduce SQL injection risks and improve application security.
- Added authentication and role-based access logic for controlled access to application features, with a maintainable code structure.

Loan Approval Prediction System, Python, Scikit-learn, Pandas

- Built a machine learning classification model to predict loan approval status from applicant data.
- Performed data cleaning, feature encoding, preprocessing, and model evaluation to assess prediction performance.
- Organized the workflow into a modular prediction pipeline covering end-to-end ML project flow from preprocessing to evaluation.
